

Office of the Vice President for Research

Technology Commercialization Services

The expert staff in the OVPR's Technology Commercialization Services group (TCS) can help faculty with all of their commercialization questions, as many of the research projects being conducted at UConn could have significant market potential. Among its primary goals, TCS aims to grow research and development activities at UConn by supporting collaborations, translational research, and entrepreneurial activities that bring economic benefit to our state and nation. TCS provides several services to help faculty at each step in the commercialization process:

- Catalyze the formation of cross-disciplinary collaborations
- Act as a driver of entrepreneurial activities and education at UConn
- Secure patent protection for new technologies, where warranted by market potential
- Help to move UConn discoveries towards the market – either through licensing or new company formation – in order to significantly enhance the societal impact of UConn's research
- Create partnerships with industry to support translational research projects
- Provide incubation space and mentoring services for UConn startups

We are here to help!
